

Catriel Bartezaghi

Backend-Focused Full Stack Software Engineer

Santa Fe, Argentina • catriel.barte@gmail.com • +54 342 528 1310 • catriel.dev • linkedin.com/in/catrielbartezaghi • github.com/catrielbartezaghi

PROFESSIONAL SUMMARY

Informatics Engineer and backend-focused Full Stack Developer experienced in business-critical industrial and financial systems. I translate complex workflows into maintainable data models, validations, integrations, automated tests, and CI/CD while modernizing active software incrementally.

TECHNICAL SKILLS

- Backend:** PHP, Laravel, REST APIs, Python, FastAPI
- Data:** MySQL, PostgreSQL, SQL, SQLAlchemy, Phinx, Alembic, data modeling
- Frontend:** JavaScript, TypeScript, React, Next.js, Vite
- Quality & Delivery:** PHPUnit, unit testing, MySQL integration testing, GitLab CI/CD, Docker, Git

PROFESSIONAL EXPERIENCE

Serfe — Full Stack Developer

Apr 2025 — Present

- Evolve a four-application PHP/MySQL ERP for a dairy manufacturer, connecting sales, supplies and inventory, production, and dispatch and logistics.
- Designed and implemented traceability across recipes, batches, production stages, warehouses, and stock movements while preserving active legacy workflows.
- Implemented picking safeguards for barcode, product, batch, shelf life, weight, origin, and available stock across individual and grouped orders.
- Modernized commercial workflows with responsive Bootstrap 5 interfaces and a React/Vite dashboard backed by testable PHP endpoints.
- Designed and implemented a two-stage GitLab CI pipeline with five jobs covering six controls: merge conflicts, PHP syntax, migration immutability and compatibility, unit tests, and MySQL integration tests.

Cipax — Full Stack Developer

Jan 2024 — Apr 2025

- Developed end-to-end modules across five Laravel applications for financial management, grants, events, and community-support workflows.
- Implemented financial workflows with database transactions, explicit state transitions, granular role-based access control (RBAC), and email-based two-factor authentication.
- Designed a multilingual AI-assisted timeline using Strategy and Factory patterns, contextual prompts, persistent caching, failure handling, permissions, and human review.

SELECTED PROJECT

TallyNorth — Personal Finance Platform

Functional personal project · Beta

tally-north.vercel.app · github.com/CatrielBartezaghi/TallyNorth

- Built a Next.js, TypeScript, FastAPI, SQLAlchemy, and PostgreSQL application that models card installments by closing date, cash-flow projections, and multi-currency consolidation using decimal-safe monetary calculations.
- Implemented JWT authentication with HttpOnly cookies and resource-level ownership filters to isolate each user's financial data.

EDUCATION & LANGUAGES

Engineering Degree in Informatics (Ingeniero en Informática), five-year program

Universidad Nacional del Litoral — Santa Fe, Argentina · Completed 2023

Languages

Spanish (Native) · English (C1) · EF SET Certificate
